

Lung Cancer Screening is now recommended.

Lung cancer screening uses a CT scan with a **lower** dose of radiation to screen for early, treatable, lung cancer.

Talk to your health care provider about screening if:

- You are 55-77 years of age
- You are a current heavy smoker or have quit in the past 15 years
- You have not had a chest CT scan in the last 12 months

PULMONARY CONSULTANTS

Between January 1 and September 30, 2017, 588 LDCT scans were performed. Twelve cancers were diagnosed with 84 percent revealing an early, treatable stage.
