

Quest: SARS Coronavirus with CoV-2 RNA, Qualitative Real-Time RT-PCR

3 result fields:

Normal range:

- | | |
|-------------------|--------------|
| 1. SARS-CoV-2 RNA | Negative |
| 2. Pan-SARS RNA | Negative |
| 3. Overall Result | Not Detected |

Result scenarios:

SARC COV-2 (SPECIFIC)	+	=	=	+
PAN SARS (viral family)	+	=	+	=
Overall result	Detected	Not Detected	Presumptive Positive	Positive

- A **Detected** result is considered a positive test result for COVID-19. This indicates that RNA from SARSCoV-2 was detected and that the patient is considered infected with the virus and presumed to be contagious.
- A **Not Detected** (negative) test result for this test means that SARS-CoV-2 RNA was not present in the specimen above the limit of detection. However, it does not rule out the possibility of COVID-19 and should not be used as the sole basis for patient management decisions.
- A **Presumptive Positive** test result for this test means that SARS-CoV-2 RNA was not present in the specimen above the limit of detection. However, it does not rule out the possibility of COVID-19 and should not be used as the sole basis for patient management decisions. Additional confirmatory testing should be conducted for differentiation.
